

PM-3PASH / 3PASH6

EXCELPellet

Manufacturer Specific Stove Adapter

The PM-3PASH Stove Adapter is only compatible with Harman Pellet Stoves and is only certified for use in combination with EXCELPellet Type L venting.

The PM-3PASH6 (6" long Stove Adapter) is designed to accommodate Harman pellet stoves with extended hoppers (e.g. P-Series). When a tee is installed on the PM-3PASH6, there will be adequate clearance to the hopper from the vertical run of venting.

Installation:

1. If your appliance ships with the flue collar (flue tailpipe) installed, remove it carefully from the stove by removing the three bolts that hold it in place.
2. Ensure the gasket between the body of the stove and the adapter is in good condition.
3. Align Stove Adapter with the holes on the appliance and secure it in place with the bolts provided with the appliance. Tighten the bolts evenly to hold the EXCELPellet adapter in place, but do not over tighten. No silicone is required.
4. Continue your vent installation with EXCELPellet venting.
5. When the stove is first started, check for leaks.

Note: The flue collar that was provided with your appliance will not be used.
